Improving as a matter of course. Even as U.S. aviation continues to grow year after year, our performance standards are charting an even steeper climb. Through careful testing, evaluation and in-depth technical analysis, we are constantly refining our systems and streamlining our procedures to ensure their maximum efficiency. We are “solutionists,” seeking improvements not only in our systems and services, but also in our own performance. Leveraging our diversity. Pooling our knowledge. And challenging ourselves to excel. In our steadfast pursuit of newer and better ways to accomplish our goals, we are ensuring safer skies and run ways, fewer delays and greater efficiency in all air operations.

Driven

Enlightened

Charting a course for the future. Not only are we meeting today’s challenges, AOS is also actively involved in preparing for the days and years ahead. As a vital part of the planning process, interacting and cooperating with all the agencies and organizations involved, we offer valuable insight to help improve quality and performance. By tapping into our wealth of experience, through sharing and analyzing information, we create innovative solutions. Develop new strategies. Test and evaluate new technologies. And implement new initiatives for our aviation systems well into the future. Our input is invaluable to the process.

At the current rate of increase, total U.S. aircraft operations are forecast to grow by more than **25%** over the next decade.
